KJM COFFEE SHOP | CUSTOMER SYSTEM

VERIFIED FLOW

Customer Journey Overview

Splash and account entry → shopping and checkout → order completion, membership, support, or logout.

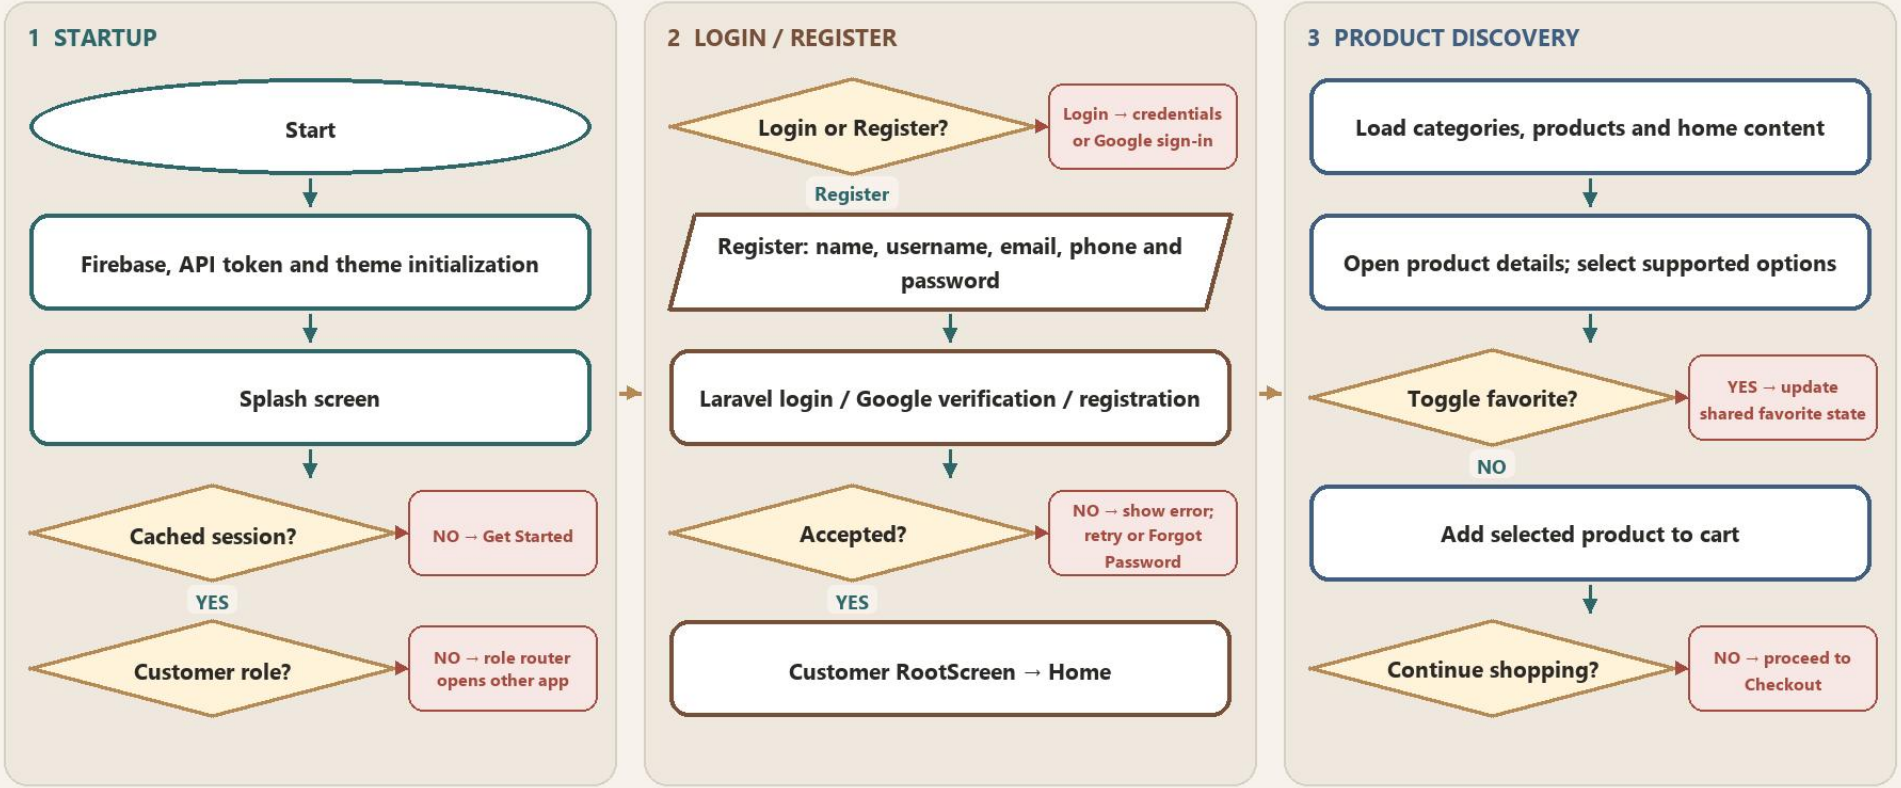

Full decision branches and server checks are in the detailed flowchart source files.

VERIFIED FLOW

Account, Browsing & Cart

Login and registration routes are separate from product discovery, but both lead to the same customer Home.

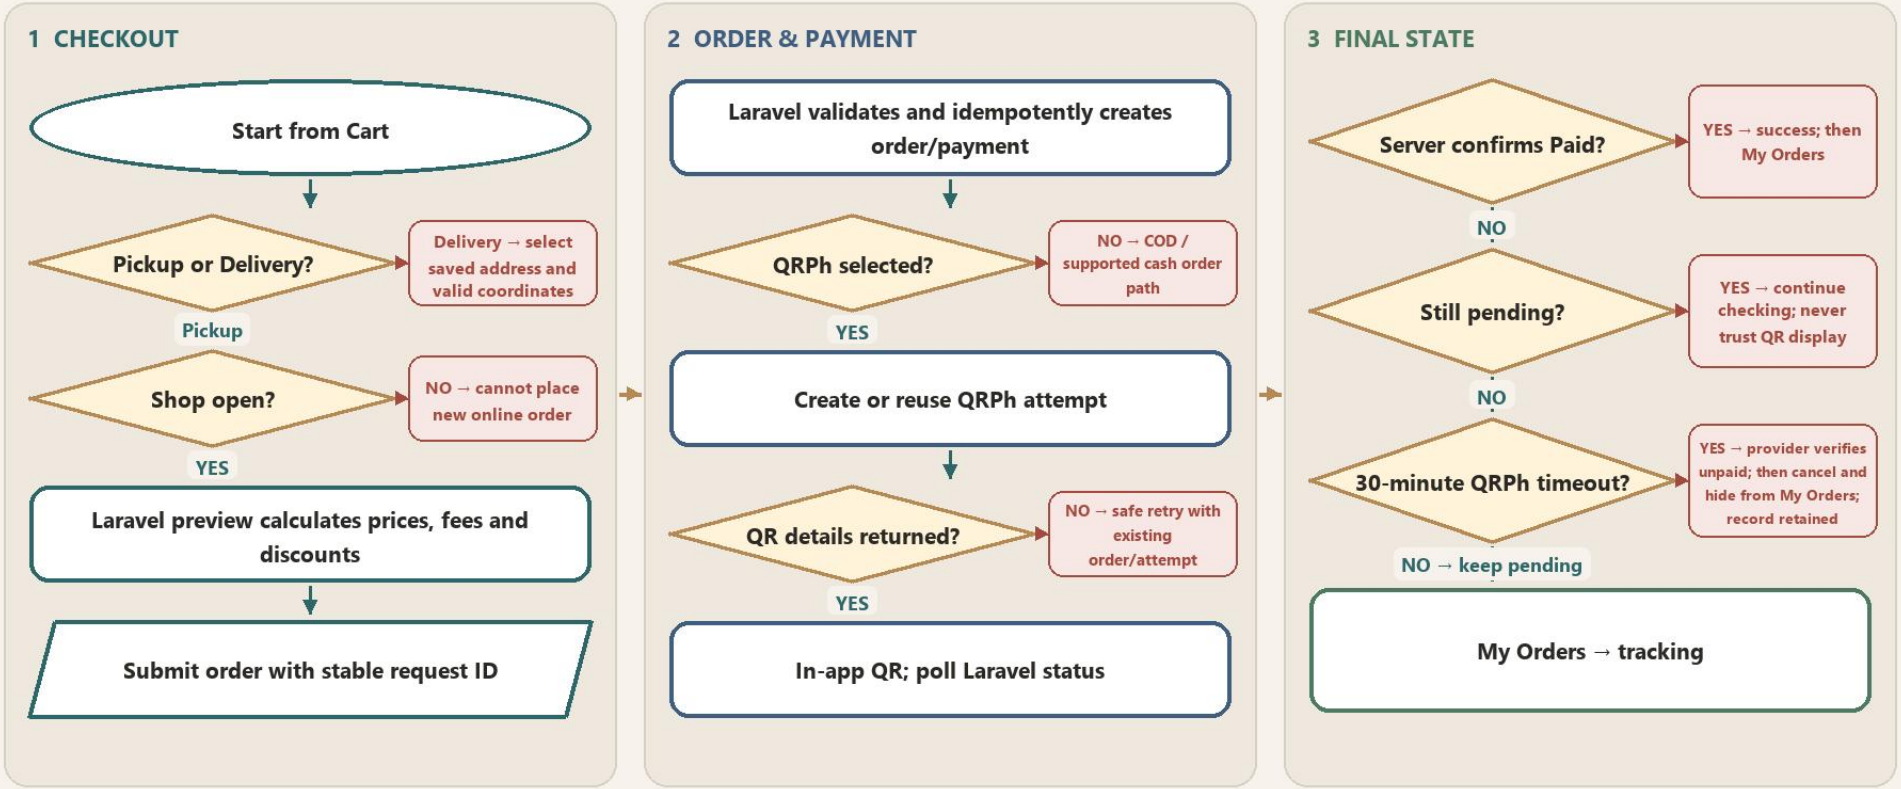

Authentication fields/endpoints verified in Flutter auth screens and Laravel API routes.

VERIFIED FLOW

Checkout & QRPh / COD Payment

Customer/Flutter submits the order; Laravel prices it; PayMongo processes QRPh and Laravel confirms payment.

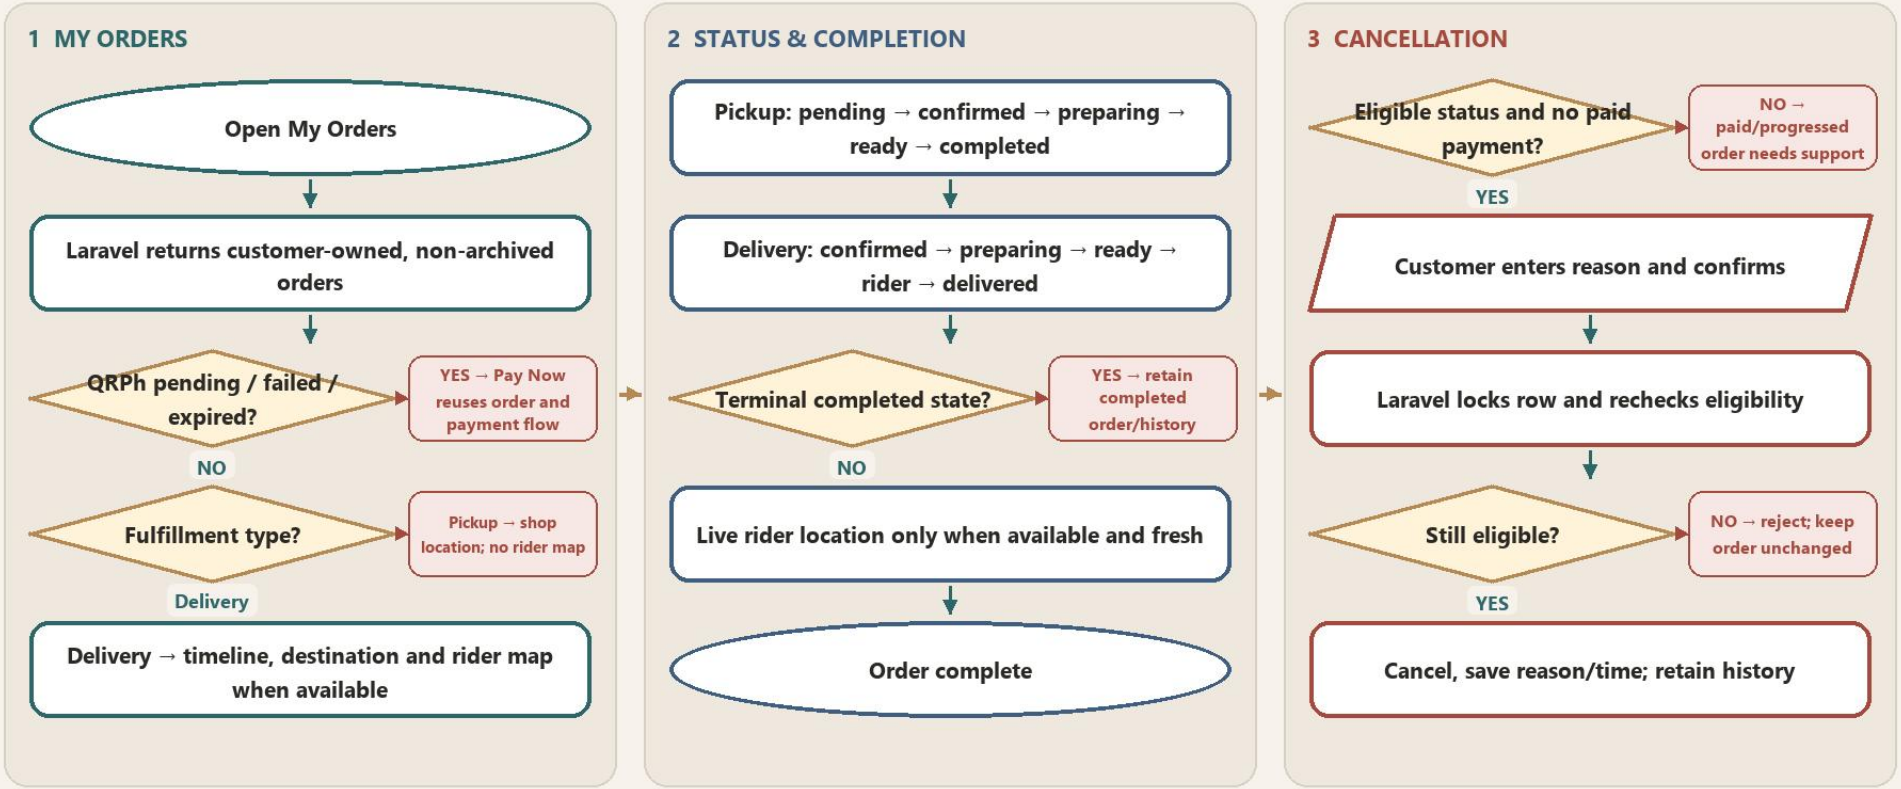

Legacy Checkout Session may open external checkout if no QR image is returned. COD behavior remains separate.

VERIFIED FLOW

My Orders, Cancellation & Tracking

Payment and fulfillment status remain separate. Pickup and Delivery use distinct customer tracking views.

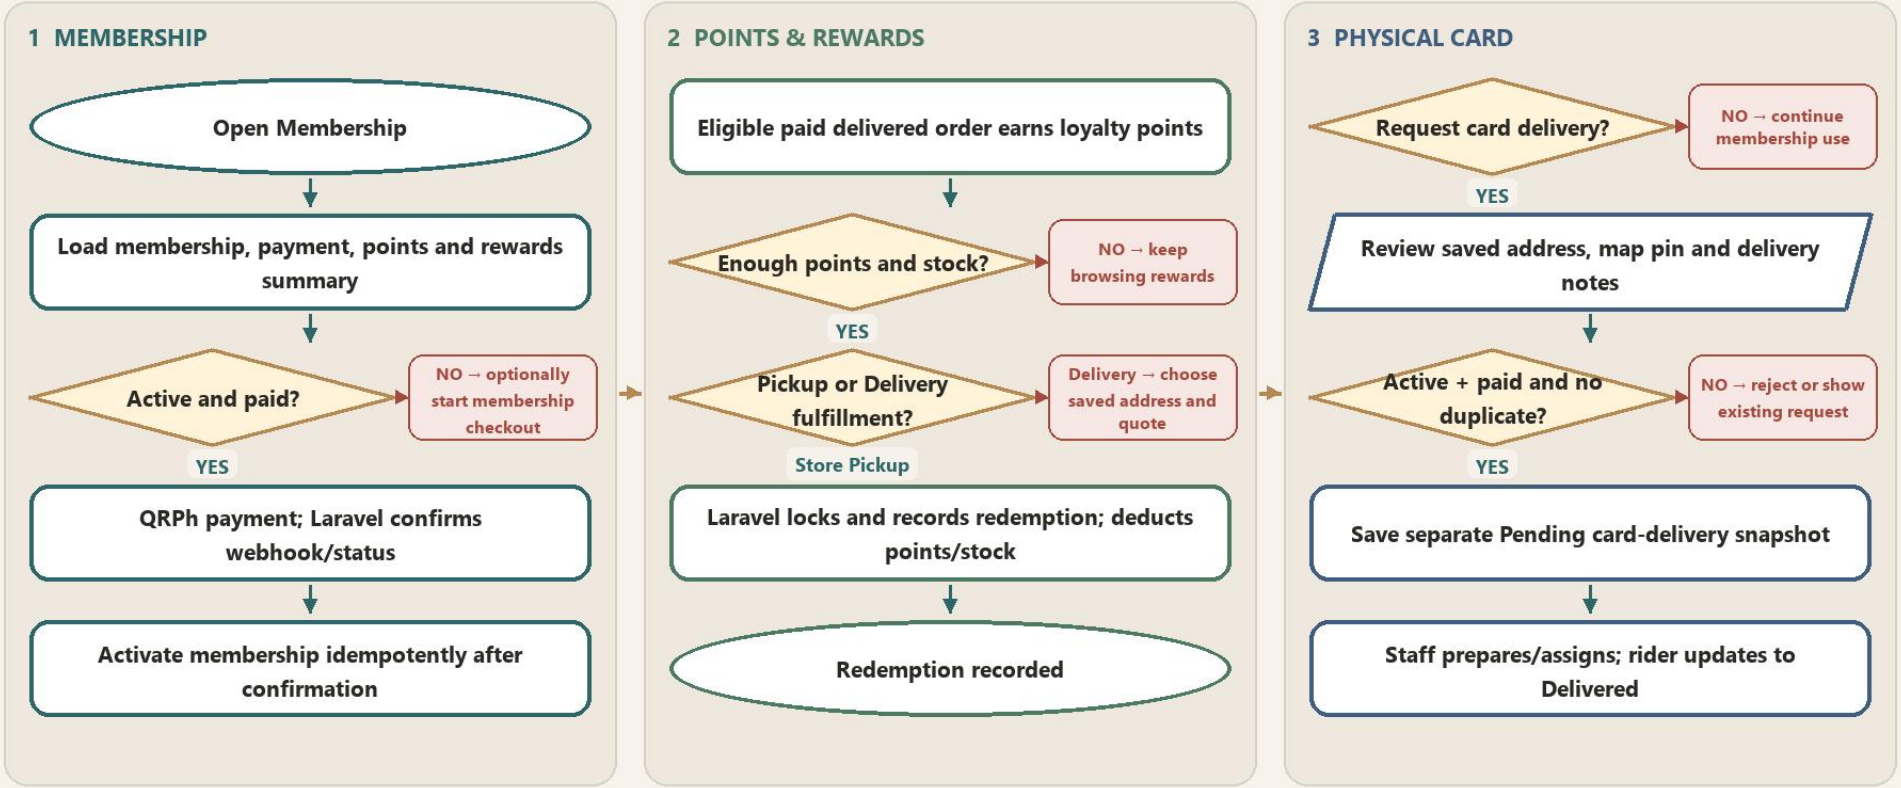

No separate persisted "Already Picked Up" state was found; pickup uses the shared `ready` and `completed` statuses.

VERIFIED FLOW

Membership, Loyalty & Card Delivery

Membership activation requires confirmed payment. Physical card delivery has its own request and status records.

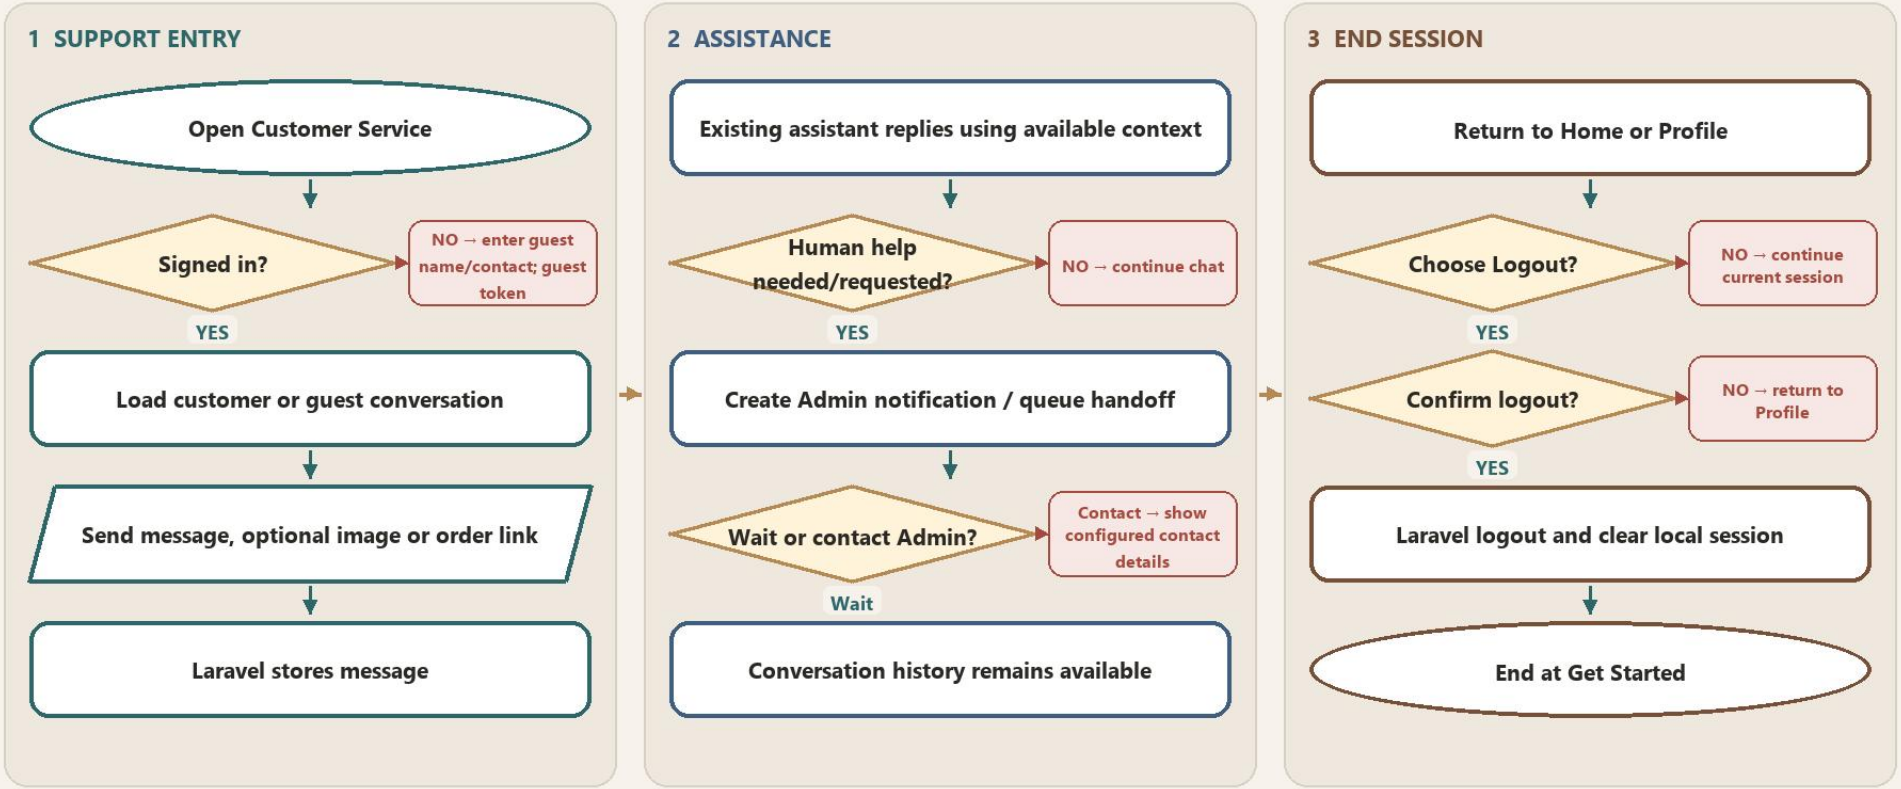

Product-order delivery tracking and membership-card delivery records are separate systems.

Customer Support & Logout

Support history is persisted; handoff messaging reflects actual notification creation and does not promise an immediate human reply.

Support assistant and notification behavior verified in existing support API and service.
